```
$ git rev-list --left-right --boundary --pretty=oneline A...B
```

```
>bbbbbbb... 3rd on b
>bbbbbbb... 2nd on b
<aaaaaaaa... 3rd on a
<aaaaaaaa... 2nd on a
-yyy-yyyy... 1st on b
-xxxxxxx... 1st on a
```

--graph
Draw a text-based graphical representation of the commit history on the left hand side of the output. This may cause extra lines to be printed in between commits, in order for the graph history to be drawn properly. Cannot be combined with **--no-walk**.

This enables parent rewriting, see [History Simplification](#) above.

This implies the **--topo-order** option by default, but the **--date-order** option may also be specified.

--show-linear-break[=<barrier>]
When **--graph** is not used, all history branches are flattened which can make it hard to see that the two consecutive commits do not belong to a linear branch. This option puts a barrier in between them in that case. If **<barrier>** is specified, it is the string that will be shown instead of the default one.

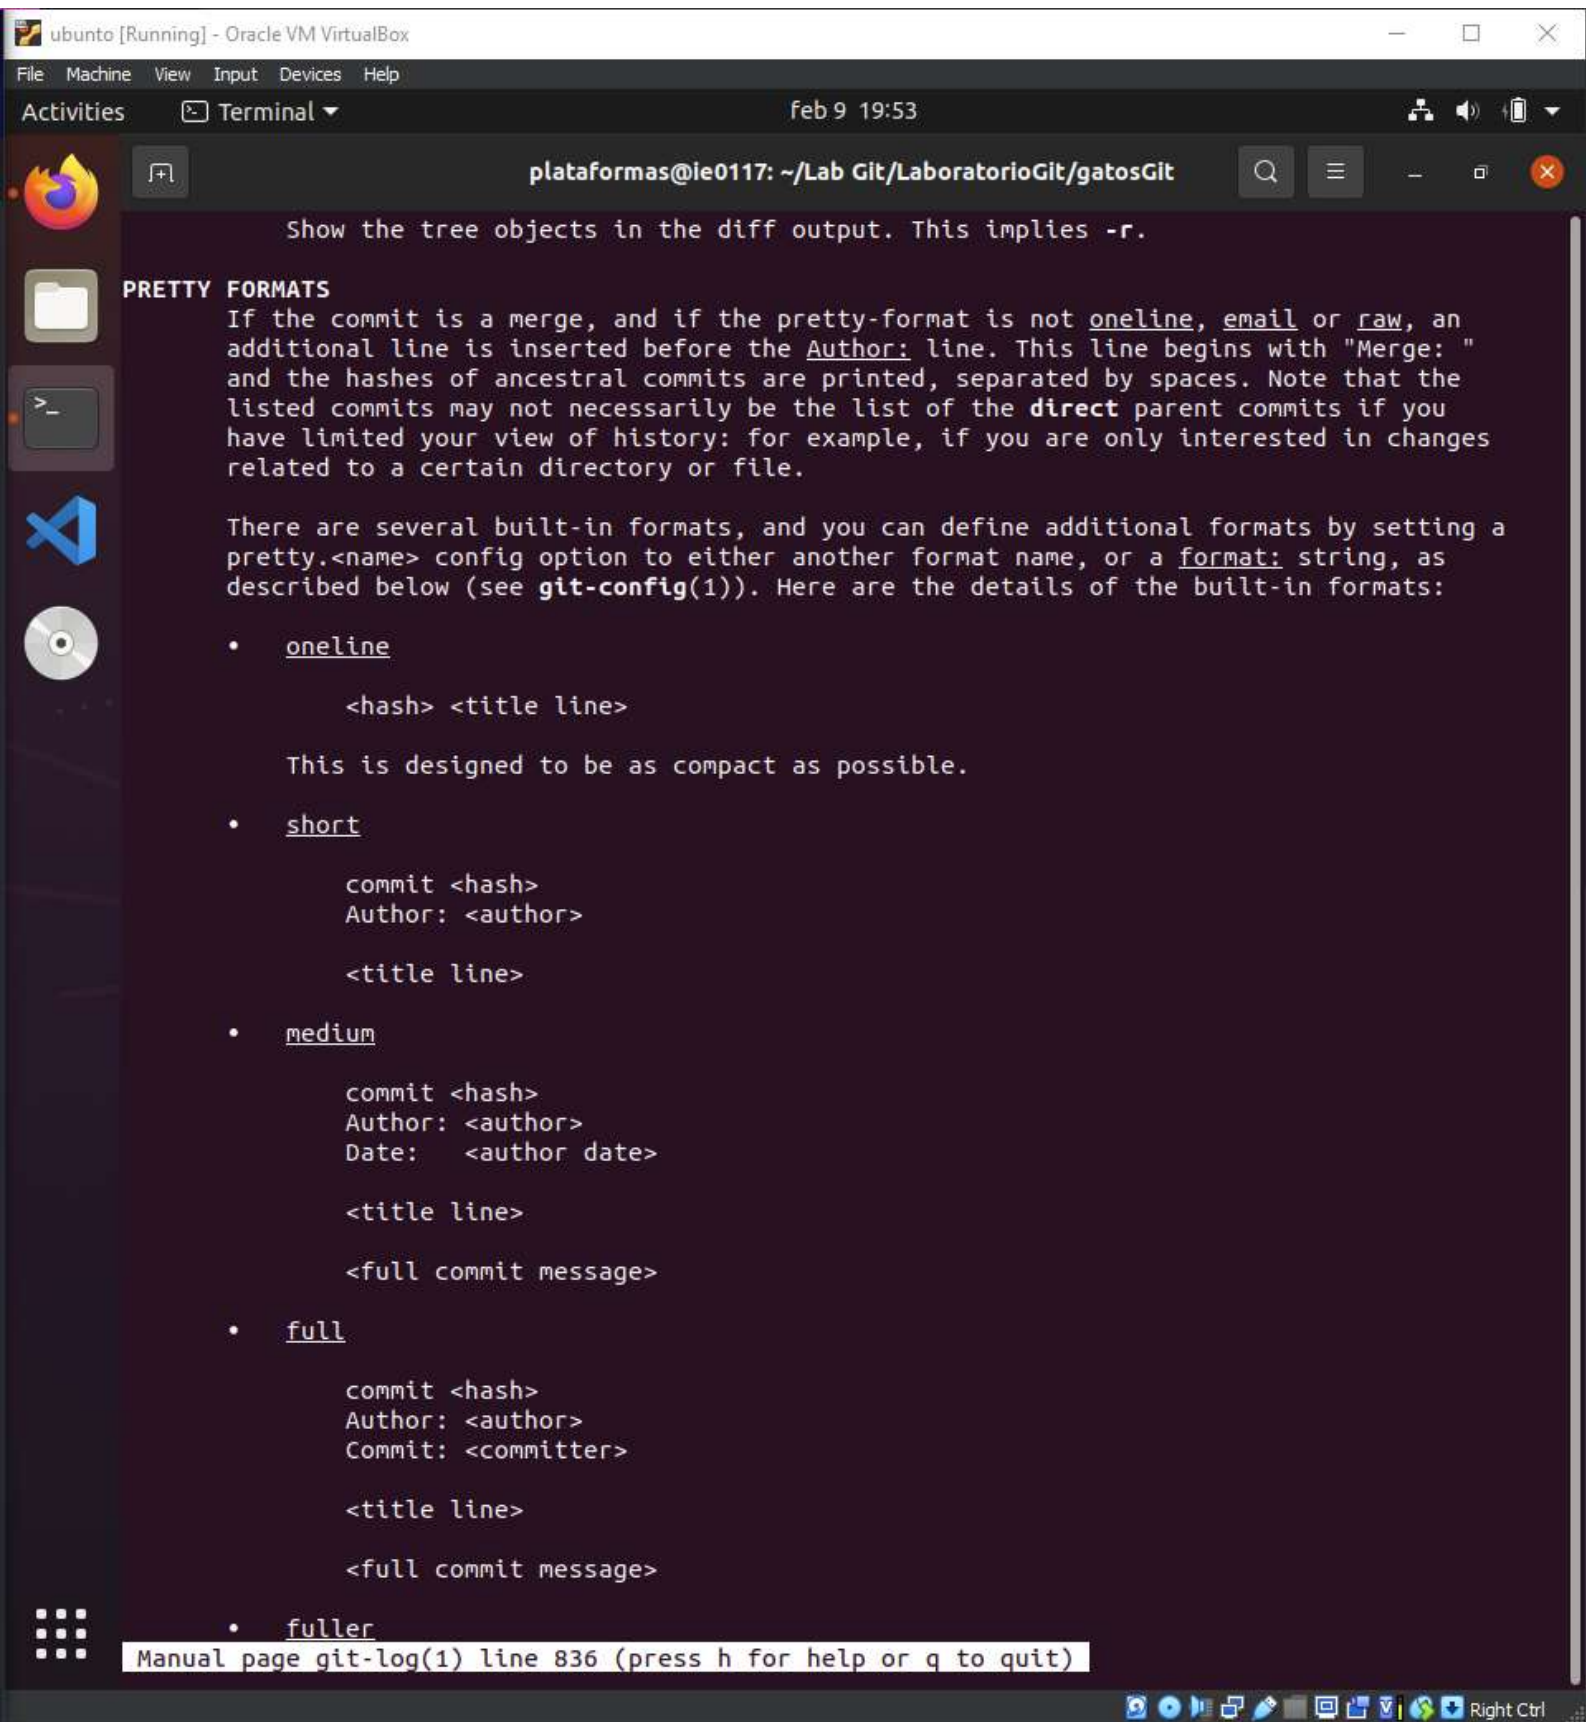

Diff Formatting
Listed below are options that control the formatting of diff output. Some of them are specific to **git-rev-list(1)**, however other diff options may be given. See **git-diff-files(1)** for more options.

-C
With this option, diff output for a merge commit shows the differences from each of the parents to the merge result simultaneously instead of showing pairwise diff between a parent and the result one at a time. Furthermore, it lists only files which were modified from all parents.

--cc
This flag implies the **-c** option and further compresses the patch output by omitting uninteresting hunks whose contents in the parents have only two variants and the merge result picks one of them without modification.

--combined-all-paths
This flag causes combined diffs (used for merge commits) to list the name of the file from all parents. It thus only has effect when **-c** or **--cc** are specified, and is likely only useful if filename changes are detected (i.e. when either rename or copy detection have been requested).
